Acknowledgements	1
1. Introduction	3
1.1. The purpose of this book	3
1.2. Why Cost-benefit Analysis?	4
1.3. Structure of the book	8
2. Infertility and Assisted Reproduction Techniques	11
2.1. Introduction	11
2.2. Infertility and its treatments	12
2.3. IVF and infertility treatments: a brief history	14
2.4. Effectiveness of IVF	15
2.5. Clinical side effects of IVF: the problem of multiple births	18
2.6. Ethical and social issues related to IVF	20
2.7. IVF regulation in Italy and other major European countries	23
2.8. Public funding of IVF	25

3. The contingent valuation method to measure the benefits of health care	29
3.1. Introduction	29
3.2. A framework to review contingent valuation studies	32
3.2.1. <i>What question do we want to answer?</i>	35
3.2.2. <i>What type of measure can we use?</i>	36
3.2.3. <i>What do we need to ask of whom?</i>	37
3.2.4. <i>What characteristics of the programme are important for determining how it is valued?</i>	40
3.2.5. <i>What question formats minimise bias and increase precision</i>	41
3.3. A literature review of contingent valuation studies in the health care field	44
3.3.1. <i>General information on the search strategy and the collected studies</i>	44
3.3.2. <i>Methodological studies</i>	55
3.3.3. <i>Non cost-benefit studies providing inputs to decision makers</i>	67
3.3.4. <i>Cost-Benefit studies</i>	70
3.3.5. <i>Health care issues investigated by contingent valuation studies</i>	73
3.3.6. <i>Type of welfare measure and types of scenarios presented to respondents</i>	76
3.3.7. <i>Classification of the studies according to survey characteristics</i>	82
3.4. Contingent valuation studies on In-Vitro-Fertilisation and other Assisted Reproductive Techniques	92

3.5. Elicitation formats, use of internet and zero WTP in Environment Contingent Valuation studies	98
3.5.1 <i>Further considerations on the WTP elicitation format</i>	99
3.5.2 <i>The use of Internet for conducting CV surveys</i>	100
3.5.3 <i>Appropriate econometric techniques in case of zero and negative WTP</i>	104
3.6. The expected contribution of the present study	107
4. Methods to Measure Costs in Healthcare	111
4.1. Introduction	111
4.2. The concept of opportunity costs	113
4.3. The classification of costs in the economic evaluation Literature	114
4.4. Accounting information and types of accounting	115
4.4.1. <i>Financial reporting data and its limitations to cost health care services</i>	116
4.4.2. <i>Types of management accounting</i>	120
4.4.3. <i>Full cost accounting</i>	120
4.4.4. <i>Differential cost accounting</i>	121
4.4.5. <i>Responsibility cost accounting</i>	122
4.5. Types of costs in management accounting	123
4.6. The estimation of full costs	126
4.6.1. <i>The allocation of indirect costs</i>	129
4.6.2. <i>Process costing and job order costing</i>	130

4.6.3. <i>Capital costs</i>	131
4.7. The role of full costing in the economic evaluation of health care programmes	132
5. A Cost-Benefit Analysis of In-Vitro-Fertilisation: Methodology and Data	135
5.1. Introduction	135
5.2. General characteristics of the survey	136
5.3. Socio-economic questions	140
5.4. Respondents' knowledge of infertility and Assisted Reproductive Techniques (ARTs)	140
5.5. Hypothetical personal use of IVF	143
5.6. Willingness to pay for using IVF	144
5.7. Willingness to pay for a publicly funded programme providing IVF to infertile couples	147
5.8. Demographic and socio-economic determinants of WTP for a publicly funded programme providing IVF to infertile couples	150
5.9. WTP estimates: the referendum (TIOLI) format	151
5.10. WTP estimates: the modified payment card format	154
5.11. Validity analysis and comparison of the two elicitation methods	155
5.12. Methods used to estimate costs of production and cost -effectiveness of In-Vitro-Fertilization	156
5.13. Cost-benefit analysis	161

6. Knowledge, attitude and willingness to pay for In-Vitro-Fertilisation	163
6.1. Introduction	163
6.2. Respondents' socio-economic characteristics	163
6.3. Respondents' knowledge of infertility and Assisted Reproductive Techniques (ARTs)	168
6.4. Hypothetical personal use of IVF	179
6.5. Variables explaining willingness to pay for personal use of IVF and for a publicly funded programme	186
7. A cost-benefit analysis of In-Vitro-Fertilisation	195
7.1. Introduction	195
7.2. Willingness to pay for hypothetical personal use of IVF	195
7.3. Willingness to pay for a publicly funded programme providing IVF to infertile couples	199
7.4. WTP estimates elicited from the TIOLI format	203
7.5. Spike models	207
7.6. WTP estimates elicited from the modified payment card format	208
7.7. Egoistic and altruistic willingness to pay	210
7.8. Validity considerations	213
7.9. A comparison between the two elicitation methods	214
7.10. Cost estimates	217
7.11. Cost-effectiveness of In-Vitro-Fertilisation	220
7.12. Cost-benefit analysis	223

8. Conclusions	227
8.1. Introduction	227
8.2. Testing actionable cost-benefit analysis	228
8.2.1. <i>How to measure benefits of an IVF programme</i>	229
8.2.2. <i>Eliciting WTP for an IVF programme: Whose value?</i>	233
8.2.3. <i>Eliciting WTP for an IVF programme: using Internet</i>	235
8.2.4. <i>Eliciting WTP for an IVF programme: Which elicitation method?</i>	237
8.2.5. <i>Costing methods</i>	240
8.3. Limitations of the study	241
8.4. Policy implications	242
